RE: Year 19 Annual Report, UniFirst Corporation, Wells G&H Site, Woburn, MA

Dear Mr. LeMay:

As indicated in our January 17, 2012 letter, it recently came to our attention that the ground surface and measuring point elevations for groundwater monitoring wells UG8, UG9, UG10, UG11, UG12, UG13, UG14, UG15, UG16, UG17, UG18, UG19, UG20, G37S, G37D, G38S, G38D, G39S and G39D were surveyed relative to the NAVD88 vertical datum rather than the NGVD29 vertical datum, which is the vertical datum for the Site. To correct for this elevation datum error, a correction of adding 0.82 feet to the ground surface and measuring point elevations as well as all groundwater elevations reported between June 2010 and September 2011 for the nineteen groundwater monitoring wells has been made. It also recently came to our attention that groundwater elevations were inadvertently reported in 2011 for damaged groundwater monitoring wells DP3, DP37S, K55D, and S66D at which groundwater elevations cannot be measured. To correct this error, groundwater elevations for these wells have been removed from affected figures and data tables. The datum and well status corrections affected the following portions of the above referenced report:

- Figure A-1C,
- Figure A-1F,
- Figure A-1G,
- Figure A-2A,
- Figure A-2B, and
- Appendix B.

For affected potentiometric maps/sections, the water levels were changed to reflect the corrected measuring point elevations and well status and the data were re-contoured. For your convenience, we have attached hard copy replacement pages for these portions of the report, as well as an updated pdf version of the entire report. The replacement pages are marked with "Rev. 1 (Jan-12)". Please contact Clayton Smith or Tim Cosgrave if you have any questions.

Sincerely,

Anne B. Sheehan
Senior Hydrogeologist
